

AIRPORT-04 — De-icing support tool in a A-CDM environment

De-icing management tool (DIMIT) to support de-icing operations and integration into the A-CDM environment. The tool provides accurate de-icing times and an optimized sequence to enable improvements in the allocation of resources to support more efficient de-icing operations. In addition the enhanced predictability and availability of de-icing information can improve other airport processes (e.g. increased adherence to target take-off times; other ground handling operations) and increase common situational awareness for airport actors.
