

ER APP ATC 104c — Adapt Controller Conformance Monitoring Tools to Use Enhanced Ground-Based Trajectory Prediction

Controller tools are adapted to use an enhanced Trajectory Prediction model obtained through the use of improved data (e.g. extended flight plan, downlinked aircraft parameters [Mode-S or ADS-B], met data).

Current and frequently changing aircraft kinematic parameters shall be used to improve monitoring aids.

Monitoring of route conformance is improved through the use of downlinked aircraft parameters [Mode S or ADS-B] such as heading, track angle and track angle rate.

Monitoring of assigned level conformance is improved through the use of downlinked aircraft parameters [Mode S or ADS-B] such as vertical rate and selected altitude.
