

# METEO-06b — Generate and provide MET information relevant for Network related operations (PCP)

ATM-MET system acquiring, generating, assembling and providing Meteorological (MET) information to the SWIM network and in a SWIM compliant manner to support all actors in Network management related operations and consistent with information relevant for other operational user environments such as Airport and final approach and TMA and En-route.

Dedicated ATM-MET System capabilities will introduce new or improved meteorological nowcast and forecast capabilities to support enhanced decision making. The MET information will be made available through a system that provides the capability to consolidate and make the MET information consistent and coherent with other operational user environments and easily accessible for SWIM actors.

This includes the ability to acquire, assemble and provide the relevant, ground, aircraft and space-based MET observation information, supported by enabler METEO-3, CTE-S7b and A/C-47.

The MET system capability for PCP focuses on acquiring, generating, assembling and providing meteorological information supporting (automated) ground and aircraft based decision making process or aids involving the relevant MET information, translation processes to derive constraints for weather and converting of this information in an ATM impact. The system capability mainly targets a 'time to decision' horizon between 20 minutes and 7 days.
