

ER ATC 157 — Enhanced ATC System Support to the Tactical Controller for Conflict Detection and Resolution in En-Route

Conflict Management is updated to integrate conflicts derived from multiple trajectory types in order to detect sector entry, in-sector, and exit conflicts, as well as conflicts for aircraft on open clearances or deviating from their planned trajectory. Resolution is assisted by indicating available and occupied levels and allowing the user to probe for conflicts on a what-if trajectory.

Controller HMI is upgraded to provide the conflict information for the tactical controller.
