

METEO-05c — Generate and provide MET information relevant for TMA and En-route related operations at short notice ('time to decision' between 3 minutes and 7days), including for low-level IFR operations.

The ATM-MET system is acquiring, generating, assembling and providing Meteorological (MET) information to the SWIM network in a SWIM compliant manner to support all actors in TMA and En-route related operations, including (rotorcraft, RPAS, etc.) low-level IFR operations. The provided information for these types of operations is made consistent with information relevant for other operational user environments such as Airport and approach and Network operations. The system capability mainly targets a 'time to decision' horizon between 3 minutes and 7 days.

The ATM-MET system outputs , amongst others, are:

- a) MET information for the tactical avoidance of hazardous meteorological conditions,
- b) MET information to support ATM situational awareness tools including display of MET information,
- c) MET warnings that give concise information of meteorological conditions that could adversely affect TMA and En-route related operations.
