

CTE-S07 — Surveillance Performance Monitoring Tools

Surveillance Performance Monitoring Tools are enablers of an harmonised performance monitoring of surveillance systems. Such monitoring will seek to identify surveillance degradation trends early, using both off-line and in continuous quasi real-time processes, applied at sensor level and at the output of the entire surveillance chain. It includes WAM, ground-based and space-based ADS-B, emerging non-cooperative surveillance sensors, as well as MLAT and SMR.
