

AUO-0206 — FOC Management of the Reference Business Trajectory

This is the accommodation of AUs' business drivers, needs and priorities (AU's optimised operations) as they change during the execution of trajectories, provided the optimum system outcome is not compromised. From the FOC perspective, it covers the management and the contribution to the update of the RBT. The sharing of the RBT contents will be based on identification of all relevant actors during the execution phase, from publication to termination on completion of the flight. FOC will support the Flight Crew during flight execution.
