

AUO-0214 — SMT including user preferences and mission trajectory information for DCB processes

WOC/any SMT users will develop several trajectory profiles for each mission, taking into consideration the operational requirements, the meteo data and other ATM constraints. The trajectory profile best suiting the mission objectives will be shared by WOC/any SMT users with NM and may be subject to CDM process. After several possible iterations, WOC/any SMT users defines upon the CDM process with NM the trajectory profile best suiting in the same time the mission requirements and the network performance expectations, incorporating ATM constraints and targets if necessary. This SMT is the representation of the Mission Requested Trajectory and will be integrated without any modifications into the DCB process, as part of the airspace configuration scenario published in NOP.
