

AUO-0110 — UDPP for Network constraints

This OI Step shall focus on the prioritisation process applied to constraints managed by the Network Management function. It will address the prioritisation of an AU's group of flights involved into one or several network constraints (possibly managed by several Flow and/or Local Traffic Managers, including LTM at Airports). The OI Step shall address as well the integration of the prioritisation into the reconciliation process in case of multiple constraints.

Rationale AU driven prioritisation process (UDPP) running during planning phase, shall allow prioritisation coming from AUs to decrease the impact on their fleet.

Forecast V3 end date 31-12-2023
