

AO-0602 — Collaborative Pre-departure Sequencing

The pre-departure sequence refers here only to the organisation of flights from the stand/parking position. Pre-departure sequences are established collaboratively with the airport CDM partners concerned taking into account agreed principles to be applied for specified reasons (e.g. slot compliance, airline preferences, night curfew, evacuation of stand/gate for arriving aircraft, etc.). The resulting pre-departure list is used by ATC while sequencing departing aircraft, as and when feasible.

Rationale The objective is to enable flights to leave their stands in the optimum order based on the operational situation.
