

AOM-0304-C — Integrated Management of Mission Trajectories in Step 3

The STEP 3 objective is to manage Mission trajectories through Dynamic Mobile Areas deployment for mission purpose in order to reduce airspace reservation/restriction (ARES) to the strict operational needs and improve network performance.

Rationale If a specific airspace volume is needed, not geographically fixed, or along portions of trajectory, or moving with aircraft or aircraft formation to be protected , it will be managed through an integrated DMA/Trajectory management process. This type of ARES will be integrated into the Mission Trajectory description.
