

DCB-0207 — Management of Critical Events

Critical event means an unusual situation or crisis involving a major loss of EATMN capacity, or a major imbalance between capacity and demand, or a major failure in the information flow involving many partners and requiring immediate action to minimise consequences and to retrieve network stability. A pan-European procedure is established for managing critical events such, as industrial actions etc., which can be tailored to the needs/requirements of individual countries thus leading to better utilisation of limited available capacity. Since the impact of some events goes beyond ATM a European Aviation Crisis Coordination Cell (EACCC) has been established supporting the activation and coordination of contingency plans at State level.

Rationale Management of critical events remains a key at European ATM network level as it is dependent on the willingness of all actors to participate in CDM processes. The management of critical events, be it proactive (known events) or reactive (unplanned, but prepared) is essential to minimise their impact on the network situation.
