

AUO-0308-A — Datalink Services used for Provision of Ground-related Clearances and Information (D-TAXI)

Exchange between Flight Crew and Controller using datalink for start-up/pushback/taxi (D-TAXI service), supported on the airborne side by DCL/ATN, CPDLC/D-TAXI.

Rationale In order to reduce voice communication leaving more capacity for other controller tasks, there is a need to have an additional communication means to radio, on which tower controllers and flight crews can exchange information, clearances and requests related to departure, push back, start-up and taxi operations.
