

AOM-0805 — Collaborative Airspace Configuration

Airspace configurations are activated through integrated collaborative decision making processes at national, sub-regional and regional levels. Procedures and system support tools shall be defined to enable to manage the airspace configurations as a continuum to meet the users' expectations.

Rationale Procedures and system support tools will allow civil and military airspace managers, flow managers to assess and compare different local airspace configurations (FMPs and FABs level), identifying mutual network impact, through a continuous CDM process aiming at providing the best airspace configurations at network level from planning to execution phases, making optimum use of the available airspace and human resources to meet the users expectations.

Forecast V3 end date 31-12-2022

Benefits start date (IOC) 24-03-2028

Full benefits date (FOC) 24-03-2032
