

MET-0201 — Enhanced MET observations, nowcasts and forecasts provided by ATM-MET systems for Step 2

Enhanced MET information (observations, nowcasts and forecasts) provided by ATM-MET systems. These ATM MET systems will provide enhanced MET information enabling ATM systems for airport-, TMA-, en-route- and network-operations, identified for Step 2, to deliver their operational improvement.

Rationale In general, MET information and the systems to derive and exchange MET information are enablers for other processes and systems to provide an operational improvement to the ATM system. Therefore no OI need to be described with respect to the provision, exchange and use of MET information except from a system engineering perspective where identified (non-MET) ENs contribute to improved MET provision/exchange and as such a MET OI related to an improved ATM-MET system was justified. No separate validation exercises are identified; enhanced MET information (observations, nowcasts and forecasts) provided by ATM-MET systems are an enabler for other systems and as such will contribute to identified Step 2 validation exercises.
