

Solution PJ.04-W2-28 — Enhanced Collaborative Airport Performance Planning and Monitoring

The key R&D activity aims at enhancing the collaborative airport performance planning and monitoring processes, in particular, through the inclusion in the airside processes of the relevant landside (passenger and baggage flow) process outputs, the consideration of connectivity and multi-modality aspects and the extension of turn-round monitoring within the APOC. The goal is to achieve a full and seamless interoperability with the AU operational systems and to improve the connectivity between regional airports and the NMOC.
