

Solution PJ.05-W2-35 — Multiple Remote Tower and Remote Tower centre

The R&D activity addresses the remotely provision of Air Traffic Services (ATS) from a Remote Tower Centre (RTC) to a large number of airports. This includes the development of RTC supervisor and support systems and advanced automation functions for a more cost efficient solution. This also covers the integration of approach for airports connected to the remote centre and connections between RTCs with systems for flow management and the development of tools and features for a flexible planning of all aerodromes connected to remote tower services.
