

Solution PJ.07-W2-40 — Mission trajectories management with integrated Dynamic Mobile Areas Type 1 and Type 2

The objective of the R&D activity is to improve the use of airspace capacity for both civil and military users and the efficiency of airspace management by introducing more automation and increased flexibility in the civil-military coordination. This will deliver improvements to the planning phase of the mission trajectory, including the connection of MT management with the booking of ARES (in the context of this solution DMA Type 1 and Type 2), for which the WOC will be the key actor. The coordination between WOC and regional NM is a key element for this R&D activity
