FCM11.1		Initial AOP/NOP Information Sharing								
REG	ASP	MIL	APO	USE	INT	IND	NM	MET	AIS	USP

Subject matter and scope

The AOP is a single, common and collaboratively agreed rolling plan available to all airport stakeholders whose purpose is to provide common situational awareness and to form the basis upon which stakeholder decisions relating to process optimization can be made. The AOP can be implemented in two steps: Initial AOP (iAOP) and Extended AOP, as described in objectives AOP11.1 and AOP11.2.

The collaborative NOP is the continuous data exchanges between the Network Manager and operational stakeholder systems in order to cover the entire flight trajectory lifecycle and to reflect priorities as required.

In order to improve the European ATM network performance, notably capacity and flight efficiency through exchange, modification and management of trajectory information there is a clear need for information sharing between the AOP and the NOP. The initial AOP/NOP integration is the technical data layer for the collaborative NOP information sharing.

The integration of AOP and NOP provides a rolling picture of the network and airport situation used by stakeholders to prepare and update their plans and their inputs to the network CDM processes, with a focus on the availability of shared operational planning and real-time data.

The iAOP/NOP integration focuses on exchanging between Airports/Airports Operational stakeholders' systems and NM systems the Arrival Planning Information (API) and Departure Planning Information (DPI) messages; those messages are an add-on to DPI messages currently provided by CDM Airports. The procedures to generate those messages and their detailed contents have to be defined in collaboration between the NM and the implementing stakeholders. NM has an implementation work plan with Airports in CEF projects for deployment of the Family.

Stakeholders also impacted are all the other involved airports stakeholders such as but not limited to:

- Aircraft operators
- Ground handlers
- De-icing handlers
- ANSPs
- MET services providers

System requirements:

- Network Manager systems shall handle arrival planning information and departure planning information from the iAOP via NM B2B services;
- In Airports, iAOP shall provide arrival and departure planning information to the NOP via NM B2B services. DPI messages might still be provided in ADEXP format until 2025, while P-DPI and API interfaces are available only via NM B2B services.
- Operational stakeholders' ground systems shall be adapted to directly interface with Network Manager systems via NM B2B services.
- Arrival and departure planning information for iAOP/NOP integration consists of the following mandatory messages:
 - o P-DPI;
 - o DPI used in CDM process;
 - o General-API;
 - o The other API messages (e.g. TTO, TTA) are considered for optional deployment in the iAOP/NOP integration.

NOTE FOR MILITARY AUTHORITIES: It is the responsibility of each military authority to review this Objective IN ITS ENTIRETY and address each of the SLoAs that the military authority considers RELEVANT for itself. This has to be done on top and above of the review of "MIL" SLoAs which identify actions EXCLUSIVE to military authorities.

Detailed SLoA Descriptions

FCM11.1-ASP01	Arrival and Departure Plan Information implementation	From: 01/01/2021	By: 31/12/2023
Action by:	ANS Providers		
Description & purpose:	ANSP in coordination with NM, AO and all relevant local implementing stakeholders have to coordinate on procedures and content related to the content of API and DPI messages. ANSP has to ensure collection and integration of data with all airport operational stakeholders, as necessary.		
	Note :This SLoA needs to be synchronised between ANSPs, AOs and NM		
Supporting material(s):	SDM - Standardisation and Regulation support to CP1 deployment 2021, Deliverable D1.1.1 07/2021 Url : https://www.sesardeploymentmanager.eu/publications/deployment-programme		
ATM Master Plan relationship:	[AIRPORT-38]-Airport/ATFCM Extended data interface [PRO-028]-Procedures to support AOP-NOP collaborative process		
Finalisation criteria:	1 - API and DPI content and procedures have been agreed and data for those messages has been integrated into the system.		
FCM11.1-ASP02	Implement Network Manager B2B services	From: 01/01/2021	By: 31/12/2023
Action by:	ANS Providers		
Description & purpose:	ANSP technically implement in their local system the creation and exchange of API and DPI messages via NM B2B Services.		
	Note :This SLoA needs to be synchronised between ANSPs, AOs and NM		
Supporting material(s):	SDM - Standardisation and Regulation support to CP1 deployment 2021, Deliverable D1.1.1 07/2021 Url : https://www.sesardeploymentmanager.eu/publications/deployment-programme		
Finalisation criteria:	1 - NM B2B services have been implemented in the systems for iAOP/NOP data exchange.		
FCM11.1-ASP03	Data validation	From: 01/01/2021	By: 31/12/2023
Action by:	ANS Providers		
Description & purpose:	ANSP in coordination with AO and NM ensure the validation of API and DPI data performing a process of systems testing of the data exchange.		
	Note :This SLoA needs to be synchronised between ANSPs, AOs and NM		
Supporting material(s):	SDM - Standardisation and Regulation support to CP1 deployment 2021, Deliverable D1.1.1 07/2021 Url : https://www.sesardeploymentmanager.eu/publications/deployment-programme
