

ATC19 — AMAN/DMAN Integration

[Download Progress Report](#)

Integrated Arrival and Departure management aims at increasing airport and TMA throughput, resilience and predictability by improved co-ordination between En-Route/Approach, local ATC and airports.

DMAN provides optimum departure sequence based on information provided by airport operator, airlines and ATC.

Similarly, AMAN calculates the optimum arrival flow to the airport. Integration of runway sequence, respecting AMAN and DMAN constraints, allows for optimum utilisation of runway.
Where this integration interferes with the 180 nautical miles (or shorter distance as indicated in Implementation Objective ATC15.2 – Arrival Management Extended to En-route Airspace Family 1.1.1) requirement for extended AMAN, the system has to be tuned to allow as large horizon as possible.

System requirements:

- Integration of departure and arrival flows are done by integrating existing AMAN and DMAN functions where runways are operated in mixed mode.
 - AMAN and DMAN systems shall be able to share data to be included in their planning algorithms calculating arrival and departure flows.
 - The integration of AMAN and DMAN must be based on the optimised pre-departure sequence and interfaces with airport CDM systems.
 - Controller Working Position (CWP) needs to support the display of AMAN/DMAN overlapping sequences.
- NOTE FOR MILITARY AUTHORITIES: It is the responsibility of each military authority to review this Objective IN ITS ENTIRETY and address each of the SLoAs that the military authority considers RELEVANT for itself. This has to be done on top and above of the review of "MIL" SLoAs which identify actions EXCLUSIVE to military authorities.*

Edition	2022
Stakeholders	Air Navigation Service Provider / Airport Operator
Type	CP1
Scope	Airport
Status	Active

Deployment Programme 2022

Family 1.2.1 - AMAN/DMAN Integration

Operating Environments

Airport

Terminal Airspace

Expected Performance Benefits

Safety	-
Capacity	-
Operational efficiency	Contribution to Predictability; increase in resilience.
Cost efficiency	-
Environment	The coupling of AMAN with DMAN has been shown to save departure fuel and improve local air quality due to a reduction in the taxi-out time during peak traffic (up to 7% savings in taxi-out fuel)
Security	-
