

Deployment Scenario Title	Enhanced ATFM slot swapping
Deployment Scenario Description	Enhanced ATFM slot swapping: this aims to improve the current NM/AU processes and make it possible to prioritise flights during pre-tactical operations. It facilitates the identification of possible swaps of a regulated flight with another flight, regulated or not, and allows a significant reduction in the rate of rejection of swap requests.
Essential Operational Change	ATM Interconnected Network
Maturity	In deployment phase: Key SESAR Solution

Applicable Operating Environment			
Airport	Terminal Airspace	En-Route	Network
